Fog fluid „Rookie“ – declaration of no-objection

Professional fog fluid for the generation of short-term artificial fog and show effects in the event industry, theater and film production. The product is a hazardous preparation according to EC - Regulation 1907/2006 (REACH) and the EC Directives EC 67/548/EEC and 1999/45/EC. It is also safe in the sense of national and international transport regulations for land, sea and air transport. The commodities do have the highest possible degree of purity.

The present water is twice distilled (double-distilled water) and chemically and microbiologically highly pure. In this way contamination of the evaporator can be avoided, and prolongs the life of the used equipment. The used containers are made of pure PE of prime selection and can be supplied after complete emptying recycling. The product is properly and to use as supplied.

The Venue Regulations (VStättV), or equivalent legislation, must be observed. Taking into account the visibility and the desired effect the fog fluid concentration in the air is to dose between 25 and max. 80 mg/m³. In particular, the fog density is to be such that exits and emergency exits are always visible in enclosed spaces. The same applies to the lighting of escape routes, their markings, stairways, shafts, building edges etc. visibilities of 25 meters (max. distance to the nearest exit acc. VStättV) must be observed.

Furthermore, the fog density is to be such that the welfare of the people in the room is guaranteed in relation to the fog in the air. In these premises the avoidance of anxiety hazy rooms may never be closed.

According VStättV the operation and maintenance of technical installations only experienced, reliable and grown persons is permitted. Every hazy room must be overseen by trained personnel. Liquid never drink, ingest or apply externally! Keep away and out of reach from children. In contact with skin or eyes wash out or off with plenty of water.
