Connects the external contact point switch may control the function of PLAY/PAUSE/STOP

7. Blackout contact point

Connects the external contact point switch may control the Blackout function

8. ON/OFF

Power On/Off the unit

9. DC In

Connects the power source of DC 9~12V

Operation Guide

1) Select Work Mode

There are 5 work modes available for DMX Recorder Pro Rack:

- 1) Manual control
- 2) Real-time trigger
- 3) Time code trigger
- 4) External DMX trigger
- 5) DMX monitor

The user may press the OK Button and keep hold it for 2 seconds, the Work Mode option menus appears, now use Up/Down button to select the work mode, and press OK to confirm.

2) Set User Parameters

2.1) When the Work Mode option menu appears, use Up/Down button to select "SET & MODIFY", press OK and input password "1234"(the default password was set as "1234"), the function option menu appears.

2.2) Record/modification of DMX data.

2.2.1) Record DMX

The user may use this function to record SCENE and SHOW, use the recorded SCENE to edit CHASE.

2.2.2) Record a SCENE

To choose and access Record SCENE function, use function button to modify SCENENAME. Select Confirmation & Record, press OK to record the current inputted DMX data. The LED indicator will flash 3 times. After finish, to select "Finish & Return" to return.

2.2.3) Record a SHOW

To choose and access Record SHOW function, use function button to modify SHOWNAME. There are 4 record methods for user choice: Manual, Auto, Semi-Auto and Smart.

2.2.3.1) Manual

Press Start button to start record, and then press Stop button to finish.

2.2.3.2) Auto

Once the recorder received at least a frame which all DMX data are "zero", the recorder is assumed to be in the state of ready to record, when received any "nonzero" DMX data, start to record, when received all "zero" DMX data again, record completed.

2.2.3.3) Semi Auto

The theory is the same as the Auto mode. The difference is that in SemiAuto mode, need to press "Stop" to finish record. Or, when received all "zero" DMX data, record completed.

2.2.3.4) Smart

This mode is applied to those DMX data which were played in a circle with changes, and the DMX data frame must be the totally same in the circle playback.

2.2.3.5) Select "Confirm & Record" to access Record control state.

Select "Start Record" to record. The recorder will handle the record in terms of the selected record method. If want to finish record in advance, you can select "Stop & Return".

2.2.4) Add a Chase(The user may use this recorder to edit Chase only if the Scene had been recorded in it.)

2.2.4.1) Select Add Chase to edit Chase.

2.2.4.2) Use function button to modify CHASENAME.

2.2.4.3) In "STEP: xxx/yyy", the specified step may be modified.

xxx: the current step

yyy: the recorded total steps of this Chase, up to 200 steps can be recorded.

2.2.4.4) Select the Scene of Step in "SceneName xxx/yyy".

xxx: the current Scene

yyy: the total Scenes available for option

2.2.4.5) Modify the time parameters of the current step in "HoldTime/FadeYime".

2.2.4.6) After the current parameters setting completed, select "Confirm & Save" to record the current step parameter.

2.2.4.7) Select "Finish & Return" to return.

Operation Guide

2.2.5) Modify the recorded Chase

2.2.5.1) To select "Edit Chase" and access it, use Up/Down to select the Chase you want to modify, press OK to confirm.

2.2.5.2) Now the user may use function button to modify ChaseName, the Scene of the specified Step, HoldTime and FadeTime.

2.2.5.3) Also the user may do "Insert Step" and "Delete Step".

2.2.5.4) Select "Confirm & Return" to return.

2.2.6) Delete Scene/Delete Show/Delete Chase
