

The Pinnex is the ultimate tool to dismantle truss fast and quiet.

This is possible due to the use of the X-Pin which is specially designed to be able to attach the pliers to the crossbar.

When using the X-Pin instead of normal Pins the static as well as the load capacity won't be affected in any way.

When using the PINNEX with the X-Pin truss constructions can be dismantled in an easy and almost silent way.

TECHNICAL DATA
